

Changes in Your Vision

If you are over 55 and notice a decrease in your vision, you may be suffering from cataracts. Many patients are surprised to know that cataracts are quite common – more than 20.5 million Americans have cataracts.

WHAT IS A CATARACT?

Cataracts are caused by the natural aging process that occurs inside of the eye. It's a gradual clouding of the eye's clear, natural lens that can, over time, make your vision less sharp.

Symptoms

Cataracts develop slowly and painlessly over time – in fact, in early stages, symptoms may be so mild that you may not even realize your vision is changing. However, as cataracts become more dense, you will experience one or more of the following:

- Blurry or cloudy vision
- Difficulty reading in low light
- Eyeglass prescription changes often, or no longer works
- Poor night vision
- Colors appear dull and washed out
- Halos or glare around lights

If you're experiencing any of these symptoms, there's no need to suffer any longer. **Call (888) 685-2099 to schedule an appointment!**

Laser Cataract Surgery

THIS IS ACTUALLY AN EXCITING TIME FOR YOU!

Lifestyle Lenses Offer More Freedom and Better Vision

Being diagnosed with a cataract provides an opportunity to enhance your vision beyond the basic cataract removal. The latest laser technology and lifestyle lenses, combined with the exceptional skill of our doctors, allows us to provide much better vision than you've had in a very long time!

Most insurance covers basic cataract surgery with a standard monofocal lens. Many patients are excited that they now have more options than ever before to enjoy freedom from glasses and contacts with Multifocal Lifestyle Lenses. While insurance typically does not cover Lifestyle Lenses, over time the cost of this advanced technology may prove to be the most affordable choice when comparing the cost of buying glasses or contacts for the rest of your life. It is important to consider all of your options when you make this once in a lifetime decision.

YOUR CATARACT SURGERY OPTIONS

Blade vs. Laser

With manual, or basic, cataract surgery our doctors will make a small incision with a blade to remove the cataract and insert your new lens. With our experienced surgeons, this procedure is effective with minimal recovery time. We have successfully performed thousands of manual cataract procedures over the years. However, the options for gaining clear vision at a variety of distances are limited with this method.

Eye Care Specialists is pleased to offer our patients a truly revolutionary and innovative alternative to manual cataract surgery... Laser Cataract Surgery. This technique allows our doctors to offer you more accuracy, precision and peace of mind with a wider range of options for better vision, particularly when combined with Lifestyle Lenses.

With a Lifestyle Lens, you may be able to see well at all distances!

- ✓ Reduce or eliminate glasses
- ✓ Regain some of your lost near vision
- ✓ Choose vision to match your lifestyle
- ✓ Restore more youthful vision

BASIC CATARACT SURGERY

- Cataract Evaluation
- Diagnostic Testing

NEAR	INTERMEDIATE	DISTANCE
Will need glasses for near, intermediate and possibly distance vision.
